

## VisibleZ Installation

- 1) The VisibleZ homepage is here: <http://csc.columbusstate.edu/woolbright/vzHomepage.htm>
- 2) Download a version (.ZIP) that is close your screen resolution.
- 3) Move the .ZIP file to a directory and unzip. This creates a subdirectory which should be left intact and contains an executable jar (RunnerB.jar) which runs VisibleZ. The subdirectory also contains a text file (vz.properties) with two settings that can be adjusted:

app.MEMSIZE=30

- The number of kibibytes allocated to memory

app.CODES=C:/Codes

- The path to the Codes directory. Use / or \\ to separate directories
